Hazardous Weather

Hazardous Weather

A cold front will move across North and Central Texas today and bring scattered showers and thunderstorms. A few strong to marginally severe storms are possible across the far south with hail to one inch in diameter and gusty winds. Severe weather is not expected across the remainder of the region.

Another round of showers and thunderstorms are expected late this afternoon into tonight ahead of an approaching cold front. Some of these storms may become strong to severe with the main threats being gusty winds and hail.

Hazardous Weather

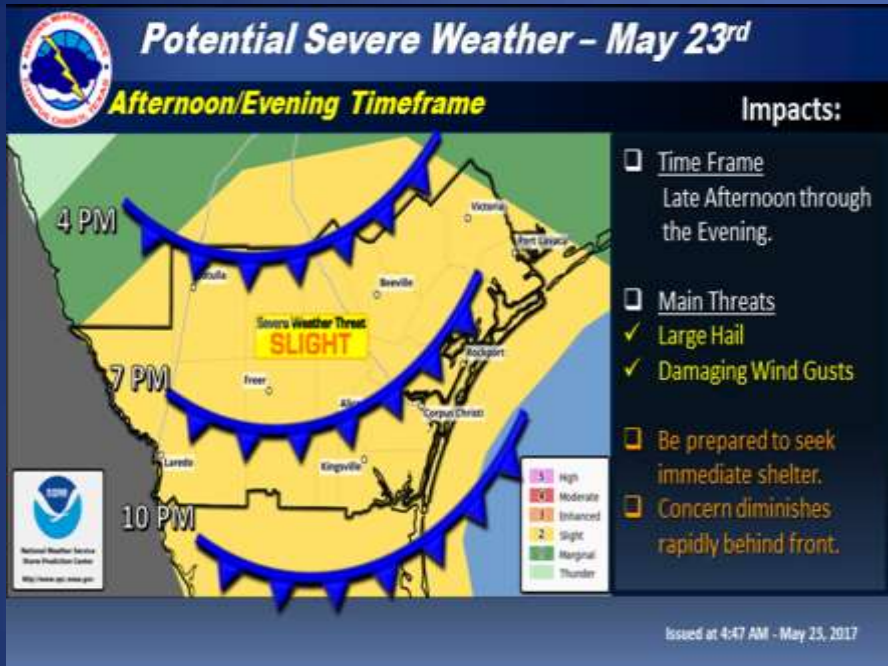

Strong to severe thunderstorms will be possible once again this afternoon as another cold front moves through the region. The main threats with these storms will be large hail and damaging winds. Highs will range from the mid 70s in the Edwards Plateau and hill Country to mid 80s in the Coastal and Rio Grande Plains. Winds behind the front will be northerly at 10-15 mph.

Strong to severe storms are possible again today over most of South Central Texas, with the best chances south of San Antonio. The main threats with any storms that develop will be large hail and damaging straight line winds, with most storms occurring during the afternoon as a cold front moves through the region.

Hazardous Weather

A cold front will move through South Texas this afternoon through the evening hours and combine with abundant moisture and an upper level disturbance to produce scattered showers and thunderstorms. There is a slight risk for severe thunderstorms this afternoon into the evening. Large hail and damaging wind will be the primary threats. Isolated tornadoes are possible.

Cold front continues to move southward later this evening. Strong to severe thunderstorms are possible with large hail and damaging winds becoming the main threats. Stay weather aware tonight.

Hazardous Weather

The Storm Prediction Center (SPC) has continued a slight risk of severe weather for our entire county warning area today through tonight, meaning scattered strong to severe thunderstorms are possible across all of deep south Texas and the Rio Grande Valley prior to and during the passage of a cold front. Potential threats include damaging winds, large hail, isolated tornadoes, moderate to heavy rain and frequent cloud to ground lightning. Potential impacts of severe weather include fence, tree, roof and home damage. Low lying areas or poorly draining areas may be at risk for flooding from any heavier downpours. To be prepared for severe weather: make sure trees are trimmed of dead branches, fences are secured, tie down lightweight objects, move vehicles into garages or carports, check the batteries and set your NOAA Weather Radio into the 'Alert' mode. Additionally, make sure your family, co-workers and students know where their 'safe place' is located (and the plan to get there!), if a warning is issued.

Showers and strong to severe thunderstorms are possible today through tonight with high temperatures into the 90s. Severe thunderstorms may contain frequent lightning, large hail, heavy rain, and isolated tornadoes. Make sure your NOAA Weather Radio has working batteries and is set to 'alert' mode. Additionally, remind your family, co-workers and students where the closest safe place is and the plan to get there in the event of a severe weather warning.

Weather Warning/Advisories Issued

DATE	WARNING TYPE	LOCATION
05/22/17	Flood Advisory	Brazoria, Chambers, Galveston, Grimes, Harris, Jackson, Liberty, Matagorda, Montgomery, Polk, San Jacinto, Trinity, Walker, and Wharton Counties
